

PRADIP MAINALI

London, United Kingdom | 07440036491 | pradipmainai5@gmail.com | github.com/pradip160

PROFESSIONAL PROFILE

Computer Science graduate from the University of West London seeking a full-time entry-level role in IT support, data analysis, technical support, cybersecurity, or junior technology positions. Practical academic experience includes Python, SQL, R, MongoDB Atlas, Google Colab, GitHub, machine learning, data analysis, and NoSQL database design. Completed projects include an ML cyber anomaly detection pipeline for hydrogen energy systems and an urban mobility data analytics/database design case study. Three years of part-time Kitchen Assistant experience strengthened teamwork, reliability, time management, communication, and ability to work under pressure.

KEY SKILLS

Technical Skills

- Python
- SQL basics
- R analytics
- MongoDB Atlas
- Google Colab
- GitHub
- Microsoft Excel
- Machine learning basics
- Data analysis
- NoSQL database design
- Cybersecurity concepts

Professional Skills

- Teamwork
- Communication
- Time management
- Working under pressure
- Reliability
- Attention to detail
- Fast learner
- Organisation
- Adaptability
- Willingness to learn

EDUCATION

Bachelor's Degree in Computer Science | University of West London, London, United Kingdom | Completed: 2026

Relevant areas: Programming, databases, data analysis, web development, software development, computer systems, cybersecurity concepts, machine learning basics, research and academic project work.

TECHNICAL PROJECTS

Machine Learning for Cyber Resilience of Hydrogen Energy Systems | Final Year / Academic Project

- Developed a Python-based anomaly detection pipeline for a hydrogen industrial control system-style scenario.
- Generated a synthetic dataset with 6,000 observations, including 5,000 normal records and 1,000 attack records.
- Modelled cyber-attack scenarios including false data injection, communication degradation, and actuator spoofing.
- Compared Logistic Regression, Random Forest, and Isolation Forest using precision, recall, F1-score, ROC-AUC, and confusion matrix.
- Achieved the strongest synthetic result with Random Forest: F1-score 0.993, precision 1.000, recall 0.987, and ROC-AUC 1.000.
- Presented findings as a research poster and discussed limitations of synthetic data and future real-world validation.

Technologies: Python, Machine Learning, Random Forest, Logistic Regression, Isolation Forest, Data Analysis, Cybersecurity, ICS, Google Colab, GitHub

NorthStar Urban Mobility and Logistics - Data Analytics and NoSQL Database Design | Academic Case Study

- Analysed a complex UK urban mobility and logistics case involving service delays, customer complaints, failed deliveries, EV charging hubs, route planning, warehouse dispatch, and fragmented data systems.
- Studied structured data such as bookings, journeys, fleet schedules, staffing, maintenance records, dispatch events, and customer payments.
- Examined semi-structured data such as mobile app interactions, GPS logs, complaint histories, driver incidents, and service exception records.
- Designed a MongoDB Atlas document-based approach to store flexible customer cases, journey events, complaints, route exceptions, and service histories.
- Used SQL within R, R analytics, Python data processing, Google Colab workflows, and GitHub version control as part of an integrated analytical solution.

Technologies: Python, R, SQL, MongoDB Atlas, Google Colab, GitHub, Data Analysis, NoSQL Database Design, Database Modelling

Student Marks System and Store Sales System | Python Practice Projects

- Built a Student Marks System to calculate total marks, average marks, pass/fail status, and a simple marksheet output.
- Built a Store Sales System to record sales information, calculate sales totals, and practise basic business logic.
- Practised Python conditions, loops, functions, calculations, data handling, and problem-solving.

Technologies: Python, Conditional Statements, Loops, Functions, Data Handling, Basic Calculations

WORK EXPERIENCE

Kitchen Assistant | London, United Kingdom | Part-time | 3 Years

- Worked in a fast-paced kitchen environment while balancing university studies.
- Supported daily kitchen operations and helped maintain smooth service during busy periods.
- Worked closely with team members and followed health, safety, hygiene, and workplace procedures.
- Managed tasks under pressure, completed duties on time, and developed strong reliability and discipline.
- Built transferable skills in teamwork, communication, organisation, problem-solving, and time management.

ADDITIONAL TRAINING AND SELF-LEARNING

- Actively improving Python, SQL, Excel, GitHub, data analysis, IT support fundamentals, cybersecurity basics, and AI/automation tools.
- Available for full-time 9-5 work, based in London, and able to start immediately.

TARGET ROLES

IT Support Trainee | Graduate IT Assistant | Junior Data Analyst | Technical Support Assistant | Cybersecurity Analyst Trainee | Junior Software Developer Trainee
